(Clean form)

Abstract: A method for making and a method for using a device designed to hold
objects by clamping while preventing damage thereto. This device includes a
cylindrical support part (1) and two arms (2), each arm having a transverse hole
and at least one of these arms is carrying an elastic buffer (3) secured thereto. This
buffer possesses a contact face and has under its contact face a thickness large
enough so that said buffer acts as a compression spring when his contact face
contacts the surface of one of the objects. And this buffer is resilient enough such
